

Step 1 - download software

On the download page (<http://fluxtime.com/download.php>) choose a download:

 Available for Windows Vista, XP, 2003, 2000, NT4, ME, 98	✓ Java detected, we recommend the 'Download without Java Runtime (1.8mb)'
 Download without Java Runtime (1.8mb)	
 Download with Java Runtime included (16.1mb)	
 View / Print Installation instructions	

There are two versions offered for download, one of them has the latest Java[™] Runtime Environment included. The page automatically detects if your computer has Java installed and recommends a download. You need Java to run FluxTime Studio.

Click the download link and choose 'Save file...' or similar when prompted. The download file is called FluxTimeStudioOffline_v1016_win_setup.exe or FluxTimeStudioOffline_v1016j_win_setup.exe.

Step 2 - install software

Locate the downloaded file on your computer and double-click it:

The installation program starts and guides you through the installation process. To accept the defaults, just hit the Enter key at each screen (recommended).

Step 3 - start software

After installation you'll find new icons on your desktop and in your Start menu:

New Desktop Icon:

On the Desktop, double-click the FluxTime icon to start FluxTime Studio.

New program group:

In the Start menu, click FluxTime to start FluxTime Studio; click Uninstall to remove the software from your computer.

If you encounter any problems, please email us at support@fluxtime.com

Have Fun!
